NEW MANUFACTURING ESTABLISHMENTS IN CANADA

This report revises and brings up to date all data including the supplementary issue published in December 1966. It contains the names, addresses and principal products manufactured by all new establishments irrespective of size, which have come into operation recently, or report that they expect to be in operation in the near future. To enable the examination of new entrants in a particular field or area, the firm names have been arranged by industry and by province within each industrial group. This report will be updated every six months.

The listing comprises the names of firms that have not been in business before, as well as new branch plants of existing businesses, all of which have indicated that they operate in the manufacturing field. The names of those establishments appearing for the first time are preceded by an asterisk(*). Branch sales offices and separate new warehousing facilities are excluded. Change of ownership does not constitute a new firm as it is essentially the same business even though it may operate under a new name.

The industrial classification follows the concepts of the Standard Industrial Classification which shows twenty major manufacturing groups. A complete listing of establishments in operation or about to start operations in any one industry can be secured by using this memorandum along with the most recent Industry Division Annual Report, listing the establishments reporting to the annual census of manufactures in that industry.

The information contained in this report should be qualified in view of the fact that there has been no evidence to show whether or not the new firms are in actual production. It has been reported that for every firm listed, production has recently started or that it is expected to start in the near future but this cannot be considered as solid information until such time as data are collected in the annual Census of Manufactures, covering the details of the manufacturing operations.

The names listed cover establishments which have come to the attention of the Bureau since the last annual report listing the names of respondents, was published for each industry. In most cases, these were the publications covering the year 1964. Since the previous report was prepared 902 new names have been added as a result of information received. During the same period 2,812 names which appeared in the June and December 1966 issues have been dropped from the listings for various reasons, such as going out of business, not manufacturing, duplication due to change of name, etc. With annual reports being issued throughout the year, it is impossible to avoid some duplication of firm names in this report, and certain of the annual reports of the Industry Division. This, however, has been kept to a minimum.

NUMBER OF NEW MANUFACTURING ESTABLISHMENTS, 1957-66

The following tables show the number of manufacturing establishments which, during the past ten years, reported for the first time to the annual Census of Manufactures and are still actively engaged in manufacturing. Data are obtained from a continuous survey of prospective new firms and include those establishments which have reported that manufacturing operations began during the year specified. Original data may be revised when reports to the annual Census of Manufactures are received, revealing more detailed information.

Beginning with the year 1963 the coverage of new firms was much more extensive as a result of a cooperative arrangement with other government departments. This accounts for the sharp increase at that time.

Throughout the period the Wood, Furniture and Fixtures Industries accounted for 24.2 per cent of the total number of new establishments, the Foods and Beverages, the Metal and Machinery Industries and the Clothing Industries together accounted for an additional 36.7 per cent and the Miscellaneous Manufacturing and the Printing and Publishing Industries 9.3 per cent and 7.8 per cent respectively.

Regional distribution (Tables 1A to 1E) shows the heaviest concentration of new manufacturing establishments in Quebec and Ontario, each of which accounted for more than 30 per cent of the total, followed by British Columbia with 13.8 per cent and the Prairies and Atlantic Regions with 12.6 per cent and 6 per cent respectively. This regional pattern is followed generally in all industries except Clothing, Wood and Metal Fabricating and Machinery. In the Clothing Industry the heaviest concentration of new firms is in the province of Quebec, which accounts for about 72.3 per cent of the total in this Industry. British Columbia reports the greatest number of new firms in the Wood Industry with Quebec, Ontario and the Atlantic Regions also showing a large number of new businesses in this field. In the Atlantic Regions the number of new firms classified to the Food and Beverage Industry and the Wood Industries accounts for 57.5 per cent of the total new firms in that area. In the Metal Fabricating and Machinery Industries, 51.8 per cent of the new entrants in these fields are in Ontario.

Breakdown by country of origin (Tables 3 and 4) reveals that 1,024 new establishments originated outside Canada. Those with affiliation or control in the United States numbered 858 (over 64 per cent of which were in Ontario), accounting for 84 per cent of the total number with foreign origin. The greatest part of this group operated in the Metal Fabricating Industries and Chemical Products followed by the Miscellaneous Manufacturing Industries. The greatest number of new establishments originating in Canada were firms active in the Wood and the Metal Fabricating Industries. Distribution of the new establishments with foreign origin by provincial location, results in the same pattern as the overall picture, with the heaviest concentration in Ontario and Quebec followed by British Columbia and Alberta.

NEW MANUFACTURING ESTABLISHMENTS IN CANADA

This report is published as a supplement to the previous issue published in June 1967, and is made up of all new manufacturing establishments in Canada that have come to our attention since that time. It contains the names, addresses and principal products manufactured by all new establishments irrespective of size, which have come into operation recently or report that they expect to be in operation in the near future. Firm names have been arranged by industry and by province within each industrial group.

The listing comprises 826 businesses that have not been operating before, as well as new branch plants of existing businesses, all of which have indicated that they operate in the manufacturing field. Branch sales offices and separate new warehousing facilities are excluded. Change of ownership does not constitute a new firm as it is essentially the same business even though it may operate under a new name.

The information contained in this report should be qualified in view of the fact that there has been no evidence to show whether or not the new firms are in actual production. It has been so indicated by the firms listed but this cannot be considered as solid information until such time as data are collected in the annual Census of Manufactures, covering the details of the manufacturing operations.

The next issue of this report will be the annual publication dated June 1968. It will contain the names of all new manufacturing establishments not yet included in a publication resulting from the annual Census of Manufactures.

NEW MANUFACTURING ESTABLISHMENTS IN CANADA

This report revises and brings up to date all data including the supplementary issue published in December 1967. It contains the names, addresses and principal products manufactured by all new establishments irrespective of size, which have come into operation recently, or report that they expect to be in operation in the near future. To enable the examination of new entrants in a particular field or area, the firm names have been arranged by industry and by province within each industrial group. This report will be updated every six months.

The listing comprises the names of firms that have not been in business before as well as new branch plants of existing businesses, all of which have indicated that they operate in the manufacturing field. The names of those establishments appearing for the first time are preceded by an asterisk(*). Branch sales offices and separate new warehousing facilities are excluded. Change of ownership does not constitute a new firm as it is essentially the same business even though it may operate under a new name.

The industrial classification follows the concepts of the Standard Industrial Classification which shows twenty major manufacturing groups. A complete listing of establishments in operation or about to start operations in any one industry can be secured by using this memorandum along with the most recent issues of the Manufacturing and Primary Industries Division's Annual Census of Manufactures Report.

The information contained in this report should be qualified in view of the fact that there has been no evidence to show whether or not the new firms are in actual production. It has been reported that for every firm listed, production has recently started or that it is expected to start in the near future but this cannot be considered as solid information until such time as data are collected in the annual Census of Manufactures, covering the details of the manufacturing operations.

The names listed cover establishments which have come to the attention of the Bureau since the last annual report listing the names of respondents, was published for each industry. In most cases, these were the publications covering the year 1965. Since the previous report was prepared 581 new names have been added as a result of information received. During the same period 1,548 names which appeared in the June and December 1967 issues have been dropped from the listings for various reasons, such as going out of business, not manufacturing, duplication due to change of name, etc. With annual reports being issued throughout the year, it is impossible to avoid some duplication of firm names in this report, and certain of the annual reports of the Manufacturing and Primary Industries Division. This, however, has been kept to a minimum.

NUMBER OF NEW MANUFACTURING ESTABLISHMENTS, 1958-67

The following tables show the number of manufacturing establishments which, during the past ten years, reported for the first time to the annual Census of Manufactures and are still actively engaged in manufacturing. Data are obtained from a continuous survey of prospective new firms and include those establishments which have reported that manufacturing operations began during the year specified. Original data may be revised when reports to the annual Census of Manufactures are received, revealing more detailed information.

Beginning with the year 1963 the coverage of new firms was much more extensive as a result of a cooperative arrangement with other government departments. This accounts for the sharp increase at that time.

Throughout the period the Wood, Furniture and Fixtures Industries accounted for 23.4 per cent of the total number of new establishments, the Foods and Beverages, the Metal and Machinery Industries and the Clothing Industries together accounted for an additional 37.7 per cent and the Miscellaneous Manufacturing and the Printing and Publishing Industries 9.6 per cent and 8.1 per cent respectively.

Regional distribution (Tables 1A to 1E) shows the heaviest concentration of new manufacturing establishments in Quebec and Ontario, each of which accounted for more than 30 per cent of the total, followed by British Columbia with 13.5 per cent and the Prairies and Atlantic Regions with 12.9 per cent and 5.9 per cent respectively. This regional pattern is followed generally in all industries except Clothing, Wood and Metal Fabricating and Machinery. In the Clothing Industry the heaviest concentration of new firms is in the province of Quebec, which accounts for about 73.5 per cent of the total in this Industry. British Columbia reports the greatest number of new firms in the Wood Industry with Quebec, Ontario and the Prairie Provinces also showing a large number of new businesses in this field. In the Atlantic Regions the number of new firms classified to the Food and Beverage Industry and the Wood Industries accounts for 57 per cent of the total new firms in that area. In the Metal Fabricating and Machinery Industries, 52.4 per cent of the new entrants in these fields are in Ontario.

Breakdown by country of origin (Tables 3 and 4) reveals that 979 new establishments originated outside Canada. Those with affiliation or control in the United States numbered 824 (over 65 per cent of which were in Ontario), accounting for 84 per cent of the total number with foreign origin. The greatest part of this group operated in the Metal Fabricating Industries and Chemical Products followed by the Miscellaneous Manufacturing Industries. The greatest number of new establishments originating in Canada were firms active in the Wood and the Metal Fabricating Industries. Distribution of the new establishments with foreign origin by provincial location, results in the same pattern as the overall picture, with the heaviest concentration in Ontario and Quebec followed by British Columbia and Alberta.

NEW MANUFACTURING ESTABLISHMENTS IN CANADA

This report is published as a supplement to the previous issue published in June 1968, and is made up of all new manufacturing establishments in Canada that have come to our attention since that time. It contains the names, addresses and principle products manufactured by all new establishments irrespective of size, which have come into operation recently or report that they expect to be in operation in the near future. Firm names have been arranged by industry and by province within each industrial group.

The listing comprises 1,023 businesses that have not been operating before, as well as new branch plants of existing businesses, all of which have indicated that they operate in the manufacturing field. Branch sales offices and separate new warehousing facilities are excluded. Change of ownership does not constitute a new firm as it is essentially the same business even though it may operate under a new name.

The information contained in this report should be qualified in view of the fact that there has been no evidence to show whether or not the new firms are in actual production. It has been so indicated by the firms listed but this cannot be considered as solid information until such time as data are collected in the annual Census of Manufactures, covering the details of the manufacturing operations.

The next issue of this report will be the annual publication dated June 1969. It will contain the names of all new manufacturing establishments not yet included in a publication resulting from the annual Census of Manufactures.

NEW MANUFACTURING ESTABLISHMENTS IN CANADA

This report revises and brings up to date all data including the supplementary issue published in December 1968. It contains the names, addresses and principal products manufactured by all new establishments irrespective of size, which have come into operation recently, or report that they expect to be in operation in the near future. To enable the examination of new entrants in a particular field or area, the firm names have been arranged by industry and by province within each industrial group. This report will be updated every six months.

The listing comprises the names of firms that have not been in business before as well as new branch plants of existing businesses, all of which have indicated that they operate in the manufacturing field. The names of those establishments appearing for the first time are preceded by an asterisk(*). Branch sales offices and separate new warehousing facilities are excluded. Change of ownership does not constitute a new firm as it is essentially the same business even though it may operate under a new name.

The industrial classification follows the concepts of the Standard Industrial Classification which shows twenty major manufacturing groups. A complete listing of establishments in operation or about to start operations in any one industry can be secured by using this memorandum along with the most recent issues of the Manufacturing and Primary Industries Division's Annual Census of Manufactures Report.

The information contained in this report should be qualified in view of the fact that there has been no evidence to show whether or not the new firms are in actual production. It has been reported that for every firm listed, production has recently started or that it is expected to start in the near future but this cannot be considered as solid information until such time as data are collected in the annual Census of Manufactures, covering the details of the manufacturing operations.

The names listed cover establishments which have come to the attention of the Bureau since the last annual report listing the names of respondents, was published for each industry. In most cases, these were the publications covering the year 1966. Since the previous report was prepared 657 new names have been added as a result of information received. During the same period 1,504 names which appeared in the June and December 1968 issues have been dropped from the listings for various reasons, such as going out of business, not manufacturing, duplication due to change of name, etc. With annual reports being issued throughout the year, it is impossible to avoid some duplication of firm names in this report, and certain of the annual reports of the Manufacturing and Primary Industries Division. This, however, has been kept to a minimum.

NUMBER OF NEW MANUFACTURING ESTABLISHMENTS, 1959-68

The following tables show the number of manufacturing establishments which, during the past ten years, reported for the first time to the annual Census of Manufactures and are still actively engaged in manufacturing. Data are obtained from a continuous survey of prospective new firms and include those establishments which have reported that manufacturing operations began during the year specified. Original data may be revised when reports to the annual Census of Manufactures are received, revealing more detailed information.

Beginning with the year 1963 the coverage of new firms was much more extensive as a result of a cooperative arrangement with other government departments. This accounts for the sharp increase at that time.

Throughout the period the Wood, Furniture and Fixtures Industries accounted for 23.2 per cent of the total number of new establishments, the Foods and Beverages, the Metal and Machinery Industries and the Clothing Industries together accounted for an additional 36.4 per cent and the Miscellaneous Manufacturing and the Printing and Publishing Industries 9.8 per cent and 8.5 per cent respectively.

Regional distribution (Tables 1A to 1E) shows the heaviest concentration of new manufacturing establishments in Quebec and Ontario, each of which accounted for 29.9 per cent of the total, followed by British Columbia with 13.8 per cent and the Prairies and Atlantic Regions with 12.8 per cent and 5.8 per cent respectively. This regional pattern is followed generally in all industries except Clothing, Wood and Metal Fabricating and Machinery. In the Clothing Industry the heaviest concentration of new firms is in the province of Quebec, which accounts for about 72.8 per cent of the total in this Industry. British Columbia reports the greatest number of new firms in the Wood Industry with Quebec, Ontario and the Prairie Provinces also showing a large number of new businesses in this field. In the Atlantic Regions the number of new firms classified to the Food and Beverage Industry and the Wood Industries accounts for 56 per cent of the total new firms in that area. In the Metal Fabricating and Machinery Industries, 52.1 per cent of the new entrants in these fields are in Ontario.

Breakdown by country of origin (Tables 3 and 4) reveals that 916 new establishments originated outside Canada. Those with affiliation or control in the United States numbered 775 (over 65 per cent of which were in Ontario), accounting for 84 per cent of the total number with foreign origin. The greatest part of this group operated in the Metal Fabricating Industries and Chemical Products followed by the Miscellaneous Manufacturing Industries. The greatest number of new establishments originating in Canada were firms active in the Wood and the Metal Fabricating Industries. Distribution of the new establishments with foreign origin by provincial location, results in the same pattern as the overall picture, with the heaviest concentration in Ontario and Quebec followed by British Columbia and Alberta.

NEW MANUFACTURING ESTABLISHMENTS IN CANADA

This report is published as a supplement to the previous issue published in June 1969, and is made up of all new manufacturing establishments in Canada that have come to our attention since that time. It contains the names, addresses and principal products manufactured by all new establishments irrespective of size, which have come into operation recently or report that they expect to be in operation in the near future. Firm names have been arranged by industry and by province within each industrial group.

The listing comprises 1,237 businesses that have not been operating before, as well as new branch plants of existing businesses, all of which have indicated that they operate in the manufacturing field. Branch sales offices and separate new warehousing facilities are excluded. Change of ownership does not constitute a new firm as it is essentially the same business even though it may operate under a new name.

The information contained in this report should be qualified in view of the fact that there has been no evidence to show whether or not the new firms are in actual production. It has been so indicated by the firms listed but this cannot be considered as solid information until such time as data are collected in the annual Census of Manufactures, covering the details of the manufacturing operations.

The next issue of this report will be the annual publication dated June 1970. It will contain the names of all new manufacturing establishments not yet included in a publication resulting from the annual Census of Manufactures.
